

SUGAR GRAZE II SORGHUM-SUDANGRASS

Sugar Graze II is a top quality 3-way cross sorghum x sorgho x sudan-grass hybrid designed for grazing, greenchop or hay. Sugar Graze II grows off rapidly and its sweet succulent stalks and broad deep green leaves result in an excellent quality forage.

Sugar Graze II is widely adapted to various growing conditions. Its inherent massive root system results in drought tolerance, which makes Sugar Graze II highly suitable for limited rainfall areas.

This hybrid will also respond to adequate moisture with the ability to produce superior yields. In general, higher planting rates are recommended for an overall premium quality forage.

Seeding:

- **Soil temperature should be at least 60°F**
- **Sugar Graze II Sorghum-Sudangrass is usually planted between June 1 and July 10 in the Midwest**
- **Seed Rate: 35-40 lbs. per acre**
