

Milage

Milage is a versatile forage crop that combines the best of selected Milo and Forage Soybean varieties to create a complete forage crop for beef and dairy cattle alike.

- Milage delivers high protein from 12% - 18%
- Milage has yields as high as 18 tons with 50% moisture
- Milage includes total digestible nutrient (TDN) levels of 60% - 65%
- Milage has lower production costs than corn silage
- Milage has high levels of palatability

Seeding:

- Soil temperature should be at least 60°F
- Milage is usually planted between June 1 and July 10 in the Midwest
- Seeding Rate: 120-150 Lbs/Acre
