

WILDLIFE SUNFLOWER

- Special attractant to game birds that prefer high oil seed crops such as dove, quail, turkey and pheasant
- Drought tolerant

Wildlife sunflower is a special attractant to upland game birds as fall and winter feed. Wildlife sunflower is preferred by dove, quail, turkey, pheasant and other species of upland game birds.

Wildlife sunflower is a very drought tolerant crop. It is a reliable source of fall and winter feed because of the tolerance to limited and sporadic supplies of available moisture.

Wildlife sunflower may be planted when danger of frost has passed and through early summer for late season seeds. Planting dates may vary depending on timing of needs for fall and winter feed supplies.

Wildlife sunflower should be planted with seed in firm contact with the soil and no deeper than 1.5 inches.

Disease/Insect/Nematode Ratings:

Downy Mildew: S
 Head Moth S

Agronomic Traits:

Early Seedling Vigor:Good
 Growth Habit:Upright with Medium Head
 Days to Midbloom: 45 to 60 days
 Relative Maturity:85 to 90 days
 Uniformity:Moderate
 Average Plant Height:26 to 40"
 Standability:Very Good

Planting Rates:

Bushel Weight: 56 lbs.
 Seeds per Pound: Approx 3,000 to 4,000
 Rate (Lbs.): **Dryland** **Irrigated**
 Rows:8 - 12 10 - 20
 Broadcast:12 - 2018 - 40
 Seeds/Sq. Ft.4 - 8 6 - 12

Adaptation Ratings:

Photosynthetic Type:C4 - Warm Season
 Soil Temperature:Warm (50° F)
 Water Requirement:Very Low

Seeding:

- Soil temperature should be at least 50° F.
- Wildlife sunflower is usually planted between June 1 and July 10 in the northern states.
- Can be no tilled into the stubble of winter and spring crops.
- Planting depth should be 1".
- Wildlife sunflower is an excellent companion with Black Autry Cowpeas and other game seed.

Harvest:

- Wildlife sunflower is usually ready for game bird feeding about 85 days after seeding.

Crop Use Information:

Life Cycle:Annual
 Ease of Establishment:Good
 Shade Tolerance:Poor - Fair
 Drought Stress:Fair
 Wet Soil:Fair
 Low pH Tolerance:Moderate
 Minimum pH: 6.0
 Saline Soils (White Alkali):Fair
 Saline - Sodic Soils (Black Alkali):Poor - Fair
 Hay:N/A
 Silage:N/A
 Grazing:Do not graze
 Grain Palatability:Excellent

Strengths

- Highly palatable after maturity to game birds
- Provides feed for many types of gamebirds
- Easily established
- Adapted over a wide area
- Responds well to varied weather conditions
- May be planted early

Weaknesses

- Requires seed to be in firm contact with the soil to ensure stand establishment
