

BULLS-EYE DEER TURNIPS

- High Palatability
- Grows Quickly
- Protein Rich Food
- Deer Can't Resist It

Bulls-Eye is intended for use as an attractant for deer and other wildlife. Plant **Bulls-Eye** at least 60 days before deer season if possible to allow adequate growth.

This ensures that there will be enough forage to keep the deer coming back to your location for several weeks or even months.

The best planting times are either Spring or early Fall. In some cases hunters have planted plots in the Spring and then replanted in the Fall to keep a constant supply of lush nutritious forage for deer all through the growing season.

SEEDING RATE

2# pkg cover 1/4 Acre

Packaged in 2# bags

PLOTSPIKE™ FORAGE OATS

- 99% Pure, No Fillers, No Chemical Coatings

Wildlife Grain Sorghum

University Developed Specifically for Wild Game and Migrating Birds

Wildlife Grain Sorghum was University developed specifically as a fall food source for upland game birds (quail, turkey, pheasant and prairie chicken) and migratory birds (ducks, geese and doves).

Easily Established

Wildlife Grain Sorghum has very low water requirements. It has good early seedling vigor and grows upright with medium to large heads. Expect mid-bloom in 45-50 days and relative maturity in 85-90 days. With very good standability the average plant height is 26-40 inches depending on water conditions.

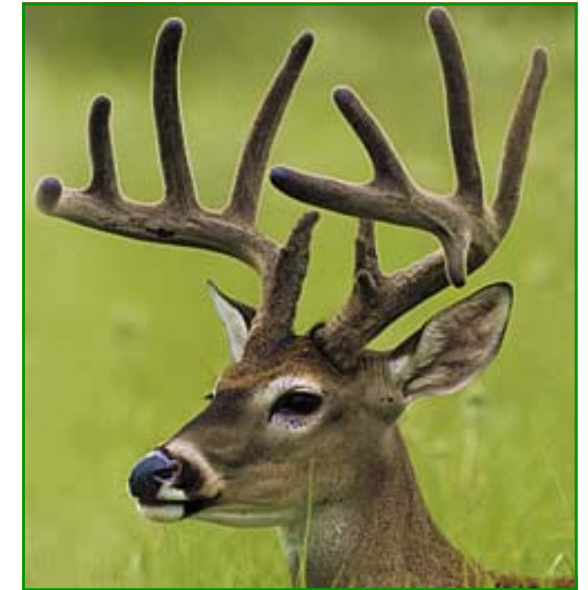

SEEDING RATE
6-8 lbs Acre Drilled
8-10 lbs/Acre Broadcast
Packaged in 50# bags

WILDLIFE SUNFLOWER

- Special attractant to birds as fall and winter feed that prefer high oil seed crops
- Preferred by Dove, Quail, Turkey, Pheasant
- Drought tolerant

Seedling Rate:
25 lbs. per acre

- Soil temperature should be at least 55°F
- Plant between May 25 and July 1 in the Midwest
- Plant seed in firm contact with soil
- Plant no deeper than 1.5 inches
