

Using Dimension on Fertilizer

Dimension on fertilizer. Keeps turf healthy. Keeps crabgrass away.

Herbicide

(Active Chemical in 23-03-08 Crabgrass Control)

<u>DIMENSION FEATURE</u>	<u>WHAT THIS MEANS</u>
<ul style="list-style-type: none"> Control and Suppress more than 25 different grassy and broadleaf weeds. 	<ul style="list-style-type: none"> Pre and Post-emergent control on that pesky crabgrass Annual Bluegrass Controlled Barnyardgrass, Ryegrass, Chickweed, Spurge and Goosegrass to name just a few
<ul style="list-style-type: none"> Little to No Soil Activity 	<ul style="list-style-type: none"> Can be used around shallow rooted ornamentals and trees with a limited lower risk of injury (DO NOT apply to exposed roots) Will not leach in to groundwater supplies Has no long term soil persistence to affect future plantings or the environment
<ul style="list-style-type: none"> Highly Concentrated Manufacturing Concentrate Used for Making End-Use Products 	<ul style="list-style-type: none"> Very little additional moisture being added to the fertilizer No sticking agents required in production Finished product retains original flowability Dimension lightly coats only the outer surface of the fertilizer, making it readily available to the weeds for controlling them Dimension stays put on the fertilizer until it is applied to the turf for weed control
<ul style="list-style-type: none"> Non-staining 	<ul style="list-style-type: none"> Dimension won't leave that yellow-stain residue on your equipment. Don't want the homeowner calling with complaints on how the children turned yellow in the yard.

Dimension ®

Dimension is a highly active, selective herbicide that has been university tested and proven to provide superior pre and post emergent care for over 25 Annual grassy and broadleaf weeds

Don't drop and lose your keys while applying Dimension turf and ornamental herbicide, you won't be able to retrace your steps to find them. Unlike pendimethalin, Dimension is non-staining and offers the most consistent pre-emergence control of crabgrass. And, because there is no yellow staining, it is more desired for use around driveways, sidewalks, cart paths, patios, painted fences and foundations.

Dimension is a selective herbicide that can be used on established lawns as well as golf course fairways, roughs, tee boxes, putting greens and commercial sod farms. It won't harm nearby established ornamentals when used according to label directions; and, its low use rates and favorable environmental profile mean less worry too. Its active ingredient, dithiopyr, features low toxicity to mammals, birds and insects. Plus it does not have significant lateral or downward movement in the soil because of its low water solubility; in fact it binds to soil particles instead of leaching into groundwater. Because Dimension offers early post-emergence activity, the window for application is wider—a real benefit for users.
